# 1. Changelog

This Router App has been tested on a router with firmware version 6.3.10. After updating your router's firmware to a higher version, check if you are using the latest version of this Router App. If not, it is important to update the app as well to ensure compatibility.

## 1.1 Event Notificator Changelog

### **v1.0.0 (2021-06-10)**

- First release (8 event types, notifications through e-mail and SNMP traps).

### **v1.1.0 (2022-11-03)**

- Reworked license information

### **v2.0.0 (2024-02-21)**

- Added support for SNMP v2c and v3 protocols
- The Enterprise OID attribute transmitted with SNMP v1 Trap requests now specifies router series which makes Event Notificator SNMP requests consistent with those generated by the built-in SNMP notification service
- Added description and summary files
- Recompiled with ModulesSDK 2.1.0

### **v2.1.0 (2024-04-16)**

- Added SMS notification support

## 2. Description of the module

This Router App is not included in the default router firmware. Installing of this Router App is described in the Configuration manual (see Chapter [Related Documents](#)).

The Router App requires firmware 6.4.1 or higher.

The *Event Notificator* provides users with a method to receive notifications on selected events through email, SMS, and SNMP.

### 3. Web Interface

Once the installation of the module is complete, the module's GUI can be invoked by clicking the module name on the Router Apps page of router's web interface.

Left part of this GUI contains menu with Configuration menu section and Administration menu section. Administration menu section contains Test Event item and Return item, which switches back from the module's web page to the router's web configuration pages. The main menu of module's GUI is shown on Figure 2.

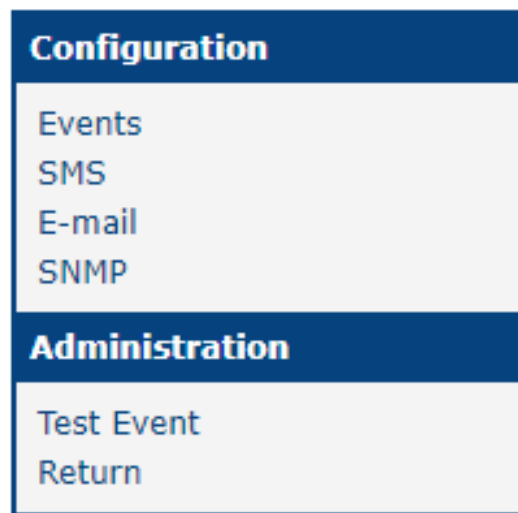

Figure 1: Menu

### 3.1.3 E-mail

In the e-mails section you can fill the data about device to better locate the origin of event and create up to 4 mail groups to which are notification send. Screenshot below is shortened with only 1 mail group just for quick example.

The screenshot shows the 'Event Notificator Configuration' form. At the top, a note states: 'Note: for e-mail notifications to work, SMTP must be configured first – see Configuration -> Services -> SMTP, or the following link: SMTP configuration'. The form is divided into several sections:

- Field:** A table with three columns: 'Field:', 'Contents (max 128 characters each):', and 'Include in subject:'.
 

Device name	<input type="text" value="[unnamed device]"/>	always included
Device location	<input type="text"/>	<input type="checkbox"/>
Device admin contact	<input type="text"/>	<input type="checkbox"/>
- Device identification in subject:**
- Mail Group 1:** A vertical stack of eight empty text input fields.
- Apply:** A button at the bottom left.

Figure 4: e-mails

### 3.1.4 SNMP

The SNMP configuration varies depending on the selected SNMP version. STMP server for sending Emails has to be properly configured in Configuration/Services/STMP for Email notification to work properly.

#### SNMP Version 1

The screenshot shows the 'Event Notificator Configuration' form for SNMP Version 1. A note at the top reads: 'Note: traps are sent with an unsigned integer value 1 with OID 1.3.6.1.4.1.30140.3.101.<event\_id>.0. See event configuration page for event IDs.' The form includes:

- SNMP manager IPv4 address:**
- SNMP version:** A dropdown menu with '1' selected.
- Community:**
- Apply:** A button at the bottom left.

Figure 5: SNMP Version 1

Item	Description
SNMP manager IPv4 address	IP address of SNMP manager.
Community	String used as a form of security measure for controlling access to network management information

Table 1: SNMP Version 1 Configuration items description

### SNMP Version 2c

**Event Notificator Configuration**

Note: traps are sent with an unsigned integer value 1 with OID 1.3.6.1.4.1.30140.3.101.<event\_id>.0. See event configuration page for event IDs.

Figure 7: SNMP Version 3

Item	Description
SNMP manager IPv4 address	IP address of SNMP manager.
PDU Type	Select PDU Type: <ul style="list-style-type: none"> <li>• Inform - Confirmed delivery.</li> <li>• Trap - Unconfirmed notification.</li> </ul>
Engine ID Payload Type	Select Engine ID Payload Type: <ul style="list-style-type: none"> <li>• Lowest MAC Address (default value)</li> <li>• ASCII Text</li> <li>• Hexadecimal Value</li> </ul>
Engine ID Payload	When selected ASCII text of Hexadecimal Value in the Payload Type enter desired value for further identification of Engine
Engine ID	ID of the Engine with added payload used as a unique identifier for SNMP entities generated from values selected above. It helps in distinguishing between different SNMP entities within the same network, allowing for secure communication and message processing. The Engine ID is used as part of the SNMPv3 message header for authentication and privacy purposes.
Context Name <i>(optional)</i>	String used to differentiate between different logical subsets of managed objects within an SNMP entity. Each context can have its own set of managed objects and access control settings. Contexts help in organizing and isolating management data, improving scalability, security, and efficiency of SNMP-based management systems.
Username	Username used for authentication purposes
Authentication	Select authentication from the list below <ul style="list-style-type: none"> <li>• none</li> <li>• SHA-512</li> <li>• SHA-386</li> <li>• SHA-256</li> <li>• SHA-224</li> <li>• SHA</li> <li>• MD5</li> </ul>
Authentication Password	Password for authentication selected above.
Privacy	Choose privacy. Options are <b>none</b> , <b>DES</b> and <b>AES</b> .
Privacy Password	When the Privacy above is selected to be DES or AES, enter the password.

Table 3: SNMP Configuration items description

## 3.2 Administration

### 3.2.1 Test Event

Here you can trigger the test event. After triggering the test event here, notifications should be sent out through all the channels configured on the previous pages. You can use this to test whether your configuration is correct. Note that you have to both enable the notification method in the Events page, and properly set up details in the *e-mail* page and/or the *SNMP* page first.

Figure 8: Test event

## 3.3 Troubleshooting

In case of any problems, check Status / System Log for any hints.
