1. Changelog

1.1 OpenVPN Custom Config Changelog

v1.0.1 (2018-03-19)

- First release

v1.0.2 (2018-06-18)

- Generate ovpn files in the init script

v1.1.0 (2020-10-01)

- Updated CSS and HTML code to match firmware 6.2.0+

2. Description of the module

Router app *OpenVPN Custom Config* is not contained in the standard router firmware. Uploading of this router app is described in the Configuration manual (see Chapter [Related Documents](#)).

OpenVPN Custom Config router app can be used to configure up to four another OpenVPN tunnels on the router. This module has no classic configuration menu like the router's OpenVPN configuration page has. Configuration of one OpenVPN tunnel is declared in one field supporting the format used in *.ovpn configuration file. Advantage of this solution is that an existing OpenVPN configuration can be easily applied to the router. The downside is, that there is no control for the configuration entered. You can then easily get into the situation when the tunnel is not established or not working as expected with limited possibility of issue debugging.

3. Web interface

Once the installation of the module is complete, the module's GUI can be invoked by clicking the module name on the *Router apps* page of router's web interface.

Left part of this GUI contains menu with *Status* section, followed by *Configuration* section which contains the configuration pages for all of four OpenVPN tunnels. *Customization* section contains only the *Return* item, which switches back from the module's web page to the router's web configuration pages. The main menu of module's GUI is shown on figure 1.

4. Module usage

4.1 Configuration page

Configuration section of the module's GUI contains configuration pages for all of four OpenVPN tunnels, from *Tunnel 1* to *Tunnel 4*. Default state of configuration page for Tunnel 1 is on figure 1.

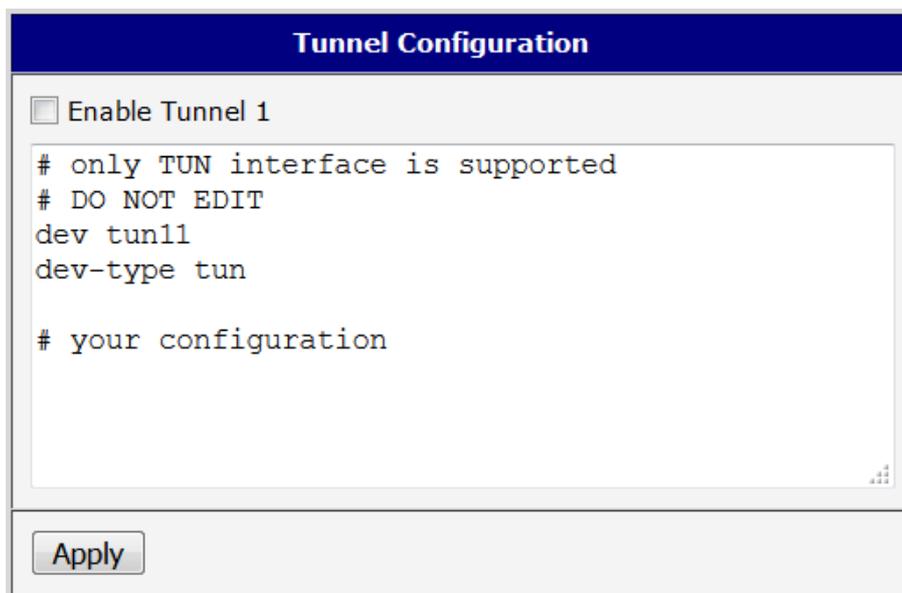

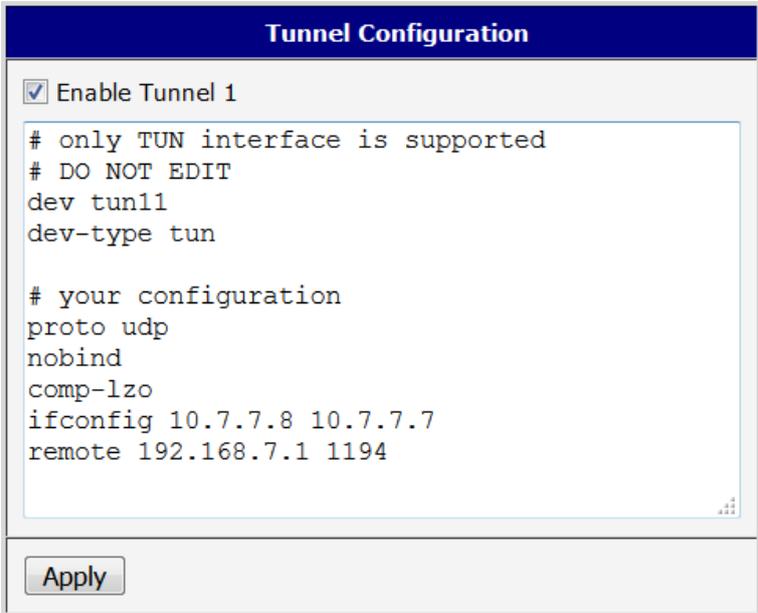

Figure 1: Configuration page - default state for Tunnel 1

As you can see, the configuration field begins with four lines which should not be edited. There are tunnel type and interface name declared on these lines. The interface name for *Tunnel 1* is *tun11* increasing to *tun14* for *Tunnel 4*.

Bellow these lines follows section four your configuration where you can put your configuration of the tunnel. Please note, that only OpenVPN features stated in configuration manual (references on page ??) of the router are declared to be supported by this module. Other settings may not work as expected.

An example of tunnel configuration is shown on figure 2. To save changes made in configuration click on *Apply* button. To apply the configuration and to create appropriate OpenVPN tunnel, check *Enable* box at the top and click on *Apply* button.

The screenshot shows a web-based configuration interface titled "Tunnel Configuration". At the top, there is a checkbox labeled "Enable Tunnel 1" which is checked. Below this is a text area containing the following configuration text:

```
# only TUN interface is supported
# DO NOT EDIT
dev tun11
dev-type tun

# your configuration
proto udp
nobind
comp-lzo
ifconfig 10.7.7.8 10.7.7.7
remote 192.168.7.1 1194
```

At the bottom of the configuration area, there is an "Apply" button.

Figure 2: Configuration page - example

4.2 Status page

OpenVPN Status page lists status of all four OpenVPN interfaces. If the tunnel is initialised, the interface name and its status is displayed. If the tunnel is not enabled, the *Disabled* keyword is mentioned for the tunnel. An example of status page is shown on figure 3.

Overview	
Tunnel 1 :	
tun11	Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00 inet addr:10.7.7.8 P-t-P:10.7.7.7 Mask:255.255.255.255 UP POINTOPOINT RUNNING NOARP MULTICAST MTU:1500 Metric:1 RX packets:0 errors:0 dropped:0 overruns:0 frame:0 TX packets:0 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:100 RX bytes:0 (0.0 B) TX bytes:0 (0.0 B)

4.3 Log page

OpenVPN Log page lists detailed log messages of all four OpenVPN interfaces configured in this router app and also for all four standard OpenVPN interfaces configured on router's web GUI. These information may be helpful for debugging, especially for issues with initialization of the interface caused by an incorrect configuration. An example of log page is shown on figure 4.

```
