1. Changelog

This Router App has been tested on a router with firmware version 6.4.0. After updating the router's firmware to a higher version, make sure that a newer version of the Router App has not also been released, as it is necessary to update it as well for compatibility reasons.

1.1 NAT Changelog

v1.0.0 (2016-10-10)

- First release.

v1.1.0 (2020-05-29)

- Increased number of rules to 32.
- Added option TCP+UDP.

v1.2.0 (2020-07-22)

- Added description field.

v1.3.0 (2020-10-01)

- Updated CSS and HTML code to match firmware 6.2.0+.

v1.3.1 (2022-01-19)

- Widened description field.

v1.4.0 (2024-01-05)

- Reworked license information
- Added `br0` interface
- Extended from 32 to 64 SNAT/DNAT entries
- Added description and summary files
- Recompiled with ModulesSDK 2.1.0

2. Description of the module

Router app *NAT* is not contained in the standard router firmware. Uploading of this router app is described in the Configuration manual (see Chapter [Related Documents](#)).

NAT router app allows router to translate addresses from one IP address space into another by modifying network address information in the IP header of packets.

3. Web Interface

Once the installation of the module is complete, the module's GUI can be invoked by clicking the module name on the Router apps page of router's web interface.

Left part of this GUI contains menu with Status menu section and Configuration menu section. Customization menu section contains only the Return item, which switches back from the module's web page to the router's web configuration pages. The main menu of module's GUI is shown on Figure 1.

3.1 Status

3.1.1 NAT rules

An overview of the current status can be viewed by clicking on the *Overview* item in the main menu of module web interface. At the beginning of this page is a list of SNAT and DNAT rules and information about whether the corresponding service is active or not.

| Status Overview | | | | | | | | | |
|-----------------------------------|-------|--------|------|-----|------|------|-------------|-------------|--|
| SNAT rules: | | | | | | | | | |
| Chain mod_nat_post (1 references) | | | | | | | | | |
| pkts | bytes | target | prot | opt | in | out | source | destination | |
| 0 | 0 | SNAT | tcp | -- | * | eth1 | 192.168.1.2 | 1.2.3.4 | tcp spt:10000 dpt:53 to:10.20.20.40:8080 |
| DNAT rules: | | | | | | | | | |
| Chain mod_nat_pre (1 references) | | | | | | | | | |
| pkts | bytes | target | prot | opt | in | out | source | destination | |
| 0 | 0 | DNAT | tcp | -- | eth1 | * | 1.2.3.4 | 10.20.20.40 | tcp spt:53 dpt:8080 to:192.168.1.2:10000 |

Figure 2: Status Overview

3.2 Configuration

3.2.1 SNAT

Source Network Address Translation (SNAT) changes the private IP address of the source host to a public IP address and may also modify the source port in the TCP/UDP headers. It is typically used by internal users to access the Internet and is performed after the routing decision is made. SNAT, the most common form of NAT, alters the source address of packets passing through the router. It is used when an internal (private) host initiates a session with an external (public) host, with the NAT device changing the private IP address of the source host to a public IP address.

Configuration of SNAT can be done on Global page, under Configuration menu section. All configuration items for SNAT configuration page are described in the table below. SNAT configuration can handle up to 64 rules.

| Interface * | Protocol | Source * | Port * | Destination * | Port * | To Source * | To Port * | Description * |
|--|----------|-------------|--------|---------------|--------|-------------|-----------|---------------------------|
| <input checked="" type="checkbox"/> eth1 | TCP | 192.168.1.2 | 10000 | 1.2.3.4 | 53 | 10.20.20.40 | 8080 | Eth1 example description. |
| <input type="checkbox"/> | all | | | | | | | |

Figure 3: SNAT Configuration

| Item | Description |
|-------------|--|
| Enable SNAT | Enabled, SNAT functionality of the module is turned on. |
| Interface | Select router interface for this rule. |
| Protocol | Select protocol for this rule. You can choose from: all, TCP, UDP, TCP+UDP, UDP. |
| Source | Enter source IP address. |
| Port | Enter source port. |
| Destination | Enter destination IP address. |
| Port | Enter destination port. |
| To Source | Enter To Source IP address. |
| To Port | Enter To Source port. |
| Description | Enter the description of this configuration field. |

Figure 4: SNAT Example

3.2.2 DNAT

Destination Network Address Translation (DNAT) changes the destination address in the IP header of a packet and may also modify the destination port in the TCP/UDP headers. It is used to redirect incoming packets with a destination of a public address/port to a private IP address/port within a network and is performed before the routing decision is made. Unlike Source Network Address Translation (SNAT), which alters the source address of packets, DNAT adjusts the destination address of packets passing through the router, allowing an external (public) host to initiate a session with an internal (private) host. The source address of return packets is automatically translated back to the IP address of the source host.

Configuration of DNAT can be done on Global page, under Configuration menu section. All configuration items for DNAT configuration page are described in the table below. DNAT configuration can handle up to 64 rules.

| DNAT Configuration | | | | | | | | |
|---|----------|----------|--------|---------------|--------|----------------|-----------|---------------------------|
| Interface * | Protocol | Source * | Port * | Destination * | Port * | To Destination | To Port * | Description * |
| <input checked="" type="checkbox"/> Enable DNAT | | | | | | | | |
| <input checked="" type="checkbox"/> eth1 | TCP | 1.2.3.4 | 53 | 10.20.20.40 | 8080 | 192.168.1.2 | 10000 | Eth1 example description. |
| <input type="checkbox"/> | all | | | | | | | |

Figure 5: DNAT Configuration

| Item | Description |
|----------------|--|
| Enable DNAT | Enabled, DNAT functionality of the module is turned on. |
| Interface | Select router interface for this rule. |
| Protocol | Select protocol for this rule. You can choose from: all, TCP, UDP, TCP+UDP, UDP. |
| Source | Enter source IP address. |
| Port | Enter source port. |
| Destination | Enter destination IP address. |
| Port | Enter destination port. |
| To Destination | Enter To Destination IP address. |
| To Port | Enter To Destination port. |
| Description | Enter the description of this configuration field. |
