

**ADVA**ANTECH

**WebAccess/VPN**

RELEASE NOTES

## Abstract

This document provides:

- Step-by-step instructions for upgrading the software.
- A comprehensive overview of new features, fixes, and other changes implemented in the software.
- A summary of known issues associated with the software.

All relevant information, including documents and binaries for the WebAccess/VPN application, can be accessed at <https://icr.advantech.com/products/software/webaccess-vpn>.

## Software details

- **Version:** 1.1.4
- **Release date:** April 16, 2024

# **Part I**

## **Application Update Instructions**

## General Update Instruction and Notices

To view details about the application, including its version, navigate to the *Application* menu under the *Administration* section and refer to the *Application Information* box. Updates can also be performed on the same page. In the *Update WA/VPN Server* box, click the *Choose File* button, select the downloaded tarball file, and then click the *Update* button.

# **Part II**

## **Changelog**

**Fixed Client Compatibility**

Resolved compatibility issues with firmware versions 6.4.0 and newer.

**Fixed Unexpected Client Shutdown**

Addressed a rare behavior issue in the client that could lead to unexpected shutdowns.

**New Products Support**

Extended client support to include the v2i and v4i router product families.

**Security Patch**

Implemented a security patch in the VPN portal's user interface.
