Not affected product

## Added SIP ALG Support

ICR-1601G

ICR-1601W

Added support for SIP Application Layer Gateway (SIP ALG). This feature allows one SIP phone behind the NAT gateway to call another SIP phone on the Internet, even the gateway executes its NAT mechanism between the Intranet and the Internet.

## Added Special AP feature

ICR-1601G

ICR-1601W

Added support of Special AP feature. This feature to request the gateway to open a pre-defined service ports for incoming packets to pass through once the trigger port is activated by local hosts.
