List of Figures

List of Tables

1. Product Overview

1.1 Product Introduction

ICR-3201 is a LAN industrial router intended for the global market. This router is an ideal device for the realization of a secure connection of two local area networks (LANs). Interconnection is carried out using two ETHERNET 10/100 interfaces and secure tunnel (IPSec, OpenVPN, L2TP). The other equally important ways to use this router is to connect any device with RS232, RS485 or I/O interface to the local network (LAN).

The standard configuration includes two Ethernet 10/100 ports, serial line RS232, RS485, one binary input and one output. The router can be equipped with a WiFi module, but this must be part of the initial configuration – it cannot be assembled to the router at some point in the future. The router can be provided only in a metal casing.

Configuration of the router may be done via a password-protected Web interface. Web interface provides detailed statistics about the router's activities, signal strength, detailed system log etc. The router supports the creation of VPN tunnels using IPSec, OpenVPN and L2TP to ensure safe communication. DHCP, NAT, NAT-T, DynDNS, NTP, VRRP, backup primary connection and many other functions are supported.

The router provides diagnostic functions which include automatically monitoring the PPP connection, automatic restart in case of connection losses, Low Power Mode and a hardware watchdog that monitors the router status. The user may insert Linux scripts which are started on various actions. It is possible to create up to four different configurations for the same router. These configurations can be switched whenever necessary via Web interface or binary input status.

The router supports automatic upgrades of both its configuration and firmware, leveraging updates from a central server. This feature ensures that the router remains up-to-date with the latest enhancements and security protocols.

This model is compatible with Advantech's remote device management platforms: WebAccess/DMP and WebAccess/VPN. These platforms facilitate comprehensive management and monitoring of network devices.

Examples of possible applications

- fleet management
- security system
- telematic
- telemetric
- remote monitoring
- vending and dispatcher machines

1.2 Hardware Overview

The router case preview is shown in Figure 1. A short description of hardware parts of the router is listed in Table 1, including the links to the chapters with a detailed description.

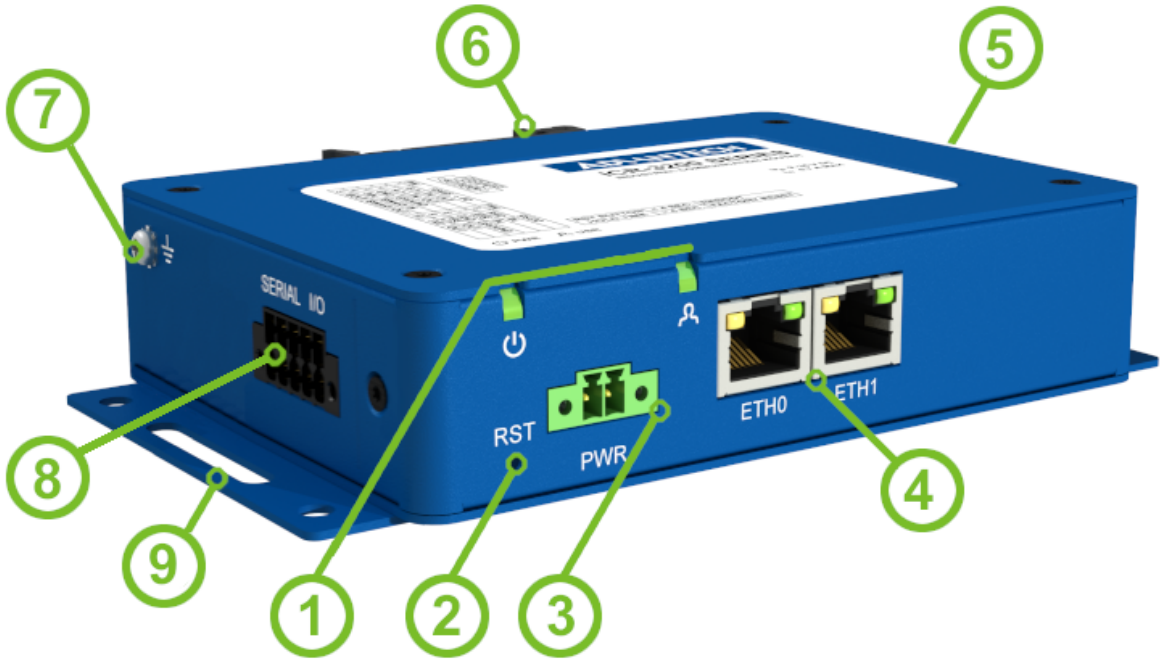

Figure 1: Hardware Overview of the Router

#	Item/Captic	Type	Description
1	LEDs	-	Status LED indication; see Chapter 2.7.
2	RST	-	Button to reboot the router or to restore the default configuration; see Chapter 2.8.
3	PWR	2-pin	Power supply 2-pin terminal socket; see Chapter 2.4.
4	ETH0, ETH1	RJ45	100 MB Ethernet connection for the firts and second LAN; see Chapter 2.3.
5	WiFi	R-SMA	Two connectors for the WiFi antennas. See Chapter 2.1 for more information and Chapter 3.4 for WiFi parameters. The WiFi2 connector can also be used for a Bluetooth antenna. See details in Chapter 2.1 and Chapter 3.5 for bluetooth parameters.
6	DIN clip	-	DIN rail clip, included as standard accessories; see Chapter 1.10.
7	Grounding screw	M3	Pay attention to proper grounding; see Chapter 2.4.
8	SERIAL | I/O	10-pin terminal	RS232, RS485, binary inputs, and binary outputs interfaces. See Chapter 2.6 for more information.
9	Wall clips	-	Wall mounting clips, included as standard accessories; see Chapter 1.9.

Table 1: Hardware Overview of the Router

1.3 Product Versions

ICR-3201 router is supplied in the following versions:

Router versions	BIN	BOUT	ETH	WiFi	RS232	RS485
Version without WiFi	1 x	1 x	2 x		1 x	1 x
Version with WiFi	1 x	1 x	2 x	1 x	1 x	1 x

Table 2: Router versions

Figure 2: Version without WiFi

Figure 3: Version with WiFi

1.4 Order Codes

Order codes overview is shown in the table below.

Product type	Product name	Order code	Features – interfaces
ICR-3200	ICR-3201	ICR-3201	LAN router, 2x ETH, 1x BI, 1x BO
ICR-3200	ICR-3201	ICR-3201W	LAN router, 2x ETH, 1x BI, 1x BO, WiFi

Table 3: Order Codes Overview

1.5 Product Revisions

For the product revision history of the entire product platform, refer to the table below. Please note that some revisions may not be available for certain order codes. The revision number is printed on both the packaging and product labels.

The router GUI can also display the product revision under *Status* → *General* → *System Information* → *Product Revision*. Please note that the default revision (Rev. 1.0) may not be available here.

Rev.#	Description
1.0	Initial version (revision number not printed on the labels).
1.1	PCBU modified to enhance immunity against surge pulses on the DC line.
2.0	PCBU and other changes; see PCN-2022-01 for details.
2.1	PCBU changes; see PCN-2023-06 for details.

Table 4: HW Revisions History

1.6 Package Contents

The standard set of router includes items listed in the following table:

Item#	Description	Figure	Q'ty
1	ICR-3201 or ICR-3201W router		1 pcs
2	DIN holder (screwed on the router)		1 set
3	Wall clips for wall mounting (screwed on the router)		2 pcs
4	2-pin terminal block for power supply (deployed on the router)		1 pcs
5	10-pin terminal block for RS232, RS485 and I/O (deployed on the router)		1 pcs
6	*Quick Start Guide Leaflet*		1 pcs

Table 5: Contents of package

1.7 Product Dimensions

For the dimensions of the product in metal and plastic boxes see the figures below. Note that all sizes are measured in millimeters.

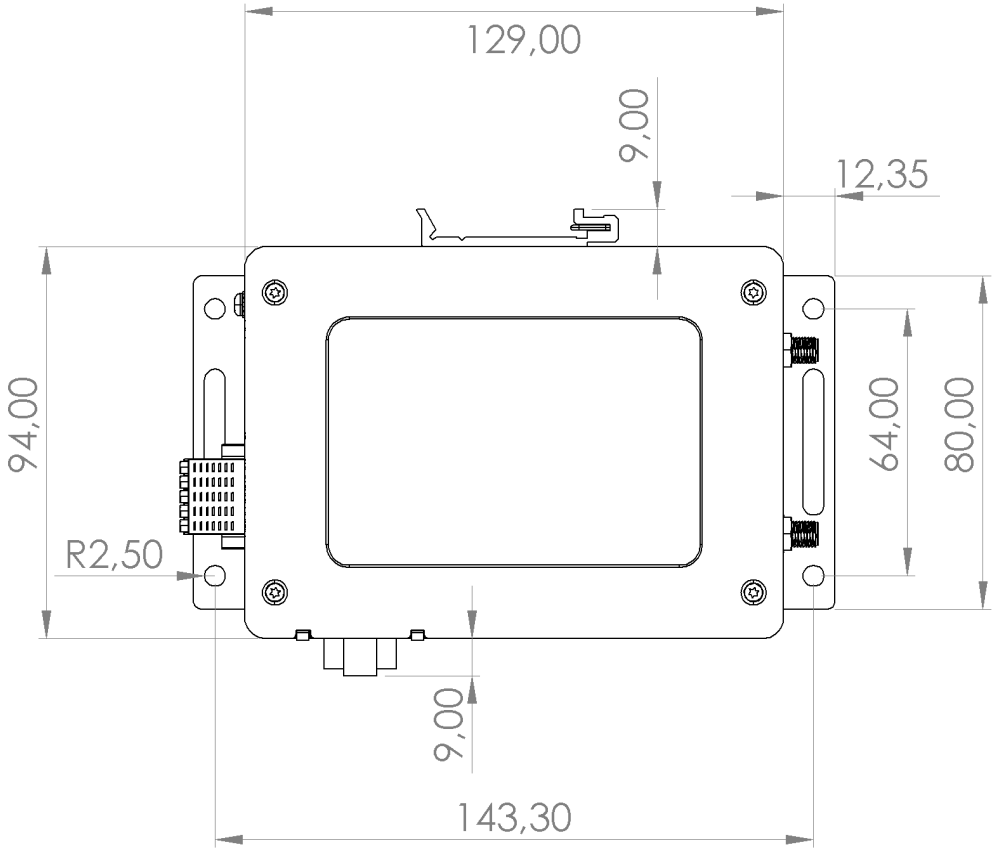

Figure 4: Basic dimensions of the router box

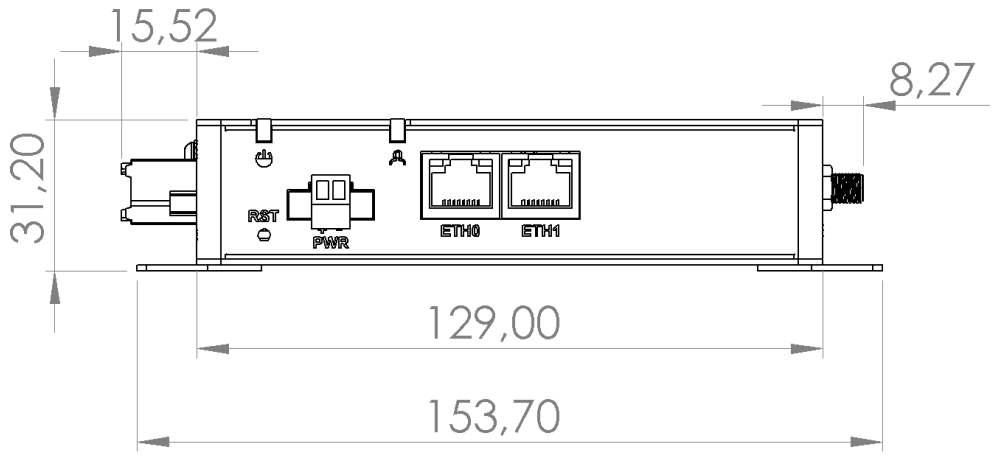

Figure 5: Basic dimensions of the router box

1.8 Mounting Recommendations

The router can be placed:

- on a flat surface,
- on a wall (or another surface) using the side clips,
- on a DIN rail EN 60715 with the included metal DIN rail clip.

For most applications with a built-in router within a switchboard, it is possible to recognize two kinds of environments:

- A non-public, industry environment of low voltage with high interference,
- a public environment of low voltage and without high interference.

For both of these environments, it is possible to mount the router to a switchboard, after which there is no need to have examination immunity or issues in connection with EMC according to EN 61439-1:2011.

In compliance with the EN 61439-1:2011 specification, it is necessary to observe the following assembly instructions for a router attached to a switchboard:

- For whip antennas it is recommended to observe a minimum distance of 6 cm from cables and metal surfaces on every side in order to avoid interference. When using an external antenna separate from the switchboard it is necessary to fit a lightning conductor.
- When mounting a router on sheet-steel we recommend using a cable antenna.
- For all cables, we recommend to bind the bunch, and for this we recommend:
  - The length of the bunch (the combination of power supply and data cables) should be a maximum 1.5 m. If the length of data cables exceeds 1.5 m or if the cable is leading towards the switchboard, we recommend installing surge protectors.
  - Data cables must not have a reticular tension of $\sim$ 230 V/50 Hz or $\sim$ 120 V/60 Hz.
- Sufficient space must be left between each connector for the handling of cables,
- To ensure the correct functioning of the router we recommend the use of an earth-bonding distribution frame for the grounding of the power supply of the router, data cables and antenna within the switchboard.

1.9 Wall Mounting

The wall mounting clip is supplied with the router as standard accessories.

The router can be screwed to a wall (or another surface) using the wall mounting clips. Two wall mounting clips are assembled to the router during the production and need to be roteted as shown of Figure 6.

There are two wholes on the clip with a diameter of 5 millimeters. For detailed information about the mounting dimensions see Chapter 1.7.

When mounting the wall mounting clip, tighten the screws with max. torque of 0.4 Nm.

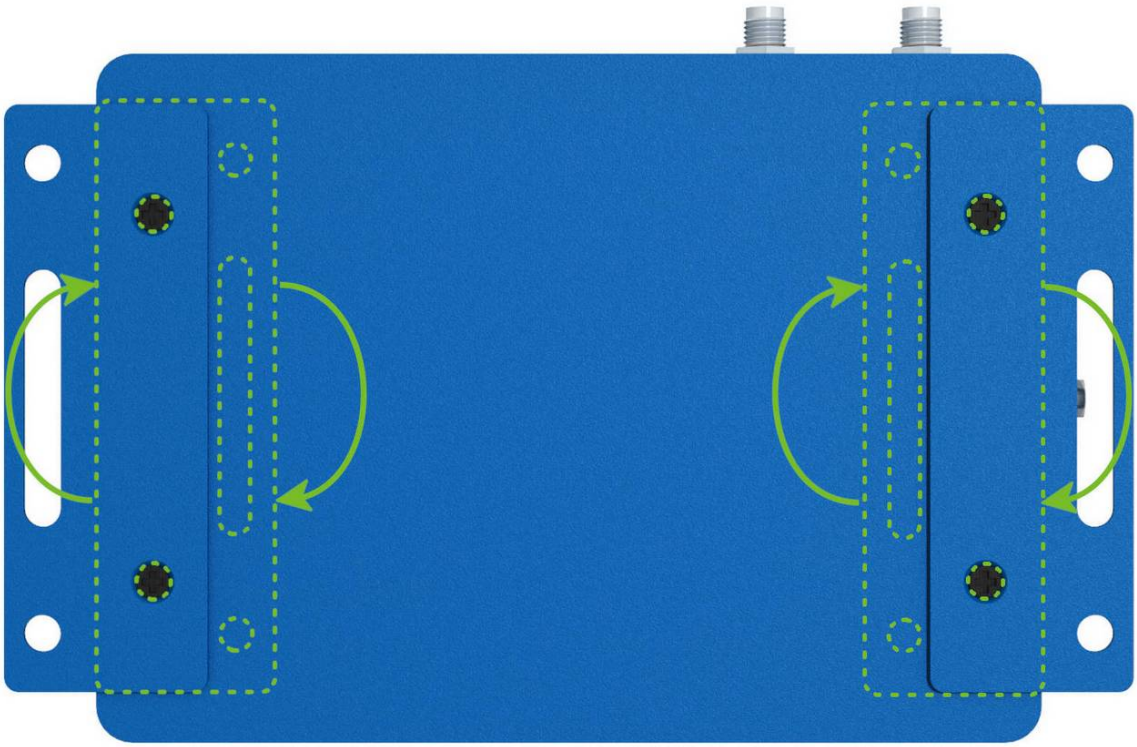

Figure 6: Rotated Wall Mounting Clips

1.10 DIN Rail Mounting

The DIN rail clip is suitable for a DIN rail according to EN 60715 standards.

When mounting the DIN rail clip, tighten the screws with max. torque of 0.4 Nm.

To remove the router from the DIN rail it is necessary to lightly push down the router so that the bottom part of the DIN rail clip hitched to the DIN rail get out of this rail and then fold out the bottom part of the router away from the DIN rail.

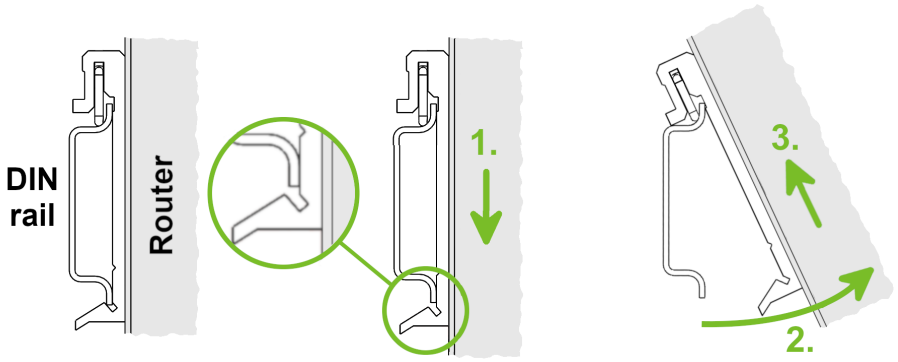

Figure 7: Removing from the DIN rail

1.11 Product Label

The figure below shows an example of the product labels with all the information printed on them.

Figure 8: Product Label

1.12 First Use

You can perform the initial configuration of the router using a web browser on your PC. This interface enables router monitoring, configuration, and administration.

- Before putting the router into operation, ensure that all components required for running your applications are connected. Refer to Chapter *1.2 Hardware Overview* for an overview of the hardware.

The procedure for connecting to a new router is described in the *Configuration Manual* [1], Chapter *Introduction* → *Configuration Environments* → *Initial Web Configuration GUI Access*. This manual also provides detailed descriptions and examples of router configuration using the web interface.

2. Hardware Functionality

See Chapter 1.2 for an overview of the product's hardware, along with links to chapters offering detailed explanations.

2.1 Antennas

For WiFi models, connect WiFi antennas to the router to *WIFI1* and *WIFI2* RP-SMA female connectors on the right panel.

Recommended tightening moment for screwing the WiFi antennas to the SMA female connectors is 0.9 Nm.

To get maximum throughput when operate WiFi at MIMO 2x2, two antennas with at least 25 dB isolation is recommended.

2.2 Bluetooth

The *WiFi2* connector is compatible with Bluetooth antennas. For detailed Bluetooth specifications, refer to Chapter 3.5. Our router's Bluetooth functionality is divided into three main components:

1. **Kernel Support and Drivers:** Integrated from firmware version 6.2.6, this includes kernel-level Bluetooth support and necessary drivers.
2. **Bluetooth Router Application with BlueZ:** This application, featuring the BlueZ Linux Bluetooth stack, enhances the router's Bluetooth capabilities. It is not pre-installed on the router. To use this feature, download the Bluetooth Router App from our website[1] and install it manually.
3. **Node-RED Applications:** For advanced Bluetooth functionality, Node-RED and its Bluetooth node can be utilized. Like the Bluetooth Router App, *Node-RED*[2] and the *Node-RED Bluetooth Node*[3] are not pre-installed and require manual installation on the router.

[1] https://icr.advantech.com/products/software/user-modules#bluetooth
[2] https://icr.advantech.com/products/software/user-modules#node-red
[3] https://icr.advantech.com/products/software/user-modules#node-red-bluetooth-node

2.3 Ethernet Interfaces

The panel socket of RJ45 is used for Ethernet interface. The pinout of the socket is shown in Figure 9 and described in Table 6.

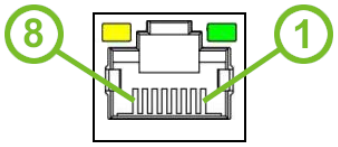

Figure 9: Ethernet Connector Pinout

Pin	Signal mark	Description
1	Tx+	Transmit Data+ (positive pole)
2	Tx-	Transmit Data- (negative pole)
3	Rx+	Receive Data+ (positive pole)
4	—	—
5	—	—
6	Rx-	Receive Data- (negative pole)
7	—	—
8	—	—

Table 6: Ethernet Connector Pinout Description

The isolation barrier of the Ethernet ports against the ground is 1500 V.

2.4 Power Supply

Terminal block 3.5 mm.

Pin number	Signal mark	Description
1	VCC(+)	Positive pole of DC supply voltage (+9 to +36 V DC)
2	GND(-)	Negative pole of DC supply voltage

Table 7: Connection of power connector

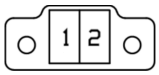

Figure 10: Power connector

Power supply for router is required between +9 V to +36 V DC supply. Protection against reversed polarity without signaling is built into the router.

If the router is grounded, using the grounding screw, there is no protection against the reversed polarity. The negative pole of the DC power supply must be at the same voltage reference as the grounding screw. If not, a voltage difference between these two points might damage the router, and only an authorized service center can fix it.

For correct operation it is necessary that the power source is able to supply a peak current of 1.2 A.

Unit has to be supplied by a power supply specified as a Limited Power Source (LPS) or CEC/NEC Class 2 source of supply.

Circuit example:

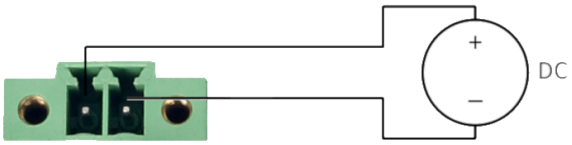

Figure 11: Connection of power supply

All metal parts, including the box, are connected together with the negative pole of power supply (common pole). To ground the router can be used the grounding screw located on the left panel.

2.5 Low Power Mode

In applications requiring low power consumption (such as solar power - not 7/24 mode) is strictly recommended to use LPM mode prior to powering down the entire router.

LPM (Low Power Mode) is a router mode where the router is in sleep mode with minimal power consumption; see Chapter efchap:BasicParams for the LPM consumption. The router can be woken up from this mode by a signal applied to the BIN0 input or after a predetermined period of time. Putting the router into LPM mode can be done using the `lpm` command, see Command Line Interface application note for more details.

2.6 Serial Interfaces and I/O Port

The RS232 and RS485 serial interfaces together with the I/O interface are physically connected to the 10-pin panel socket. All three interfaces are not isolated from the router. The pinout of this conector is described in the tables below.

Figure 12: Serial + I/O connector

Pin	Signal mark	Description
1	B (+)	IN/OUT
2	A (-)	IN/OUT
3	GND	GROUND

Table 8: Connection of RS485

We recommend connecting a termination resistor outside the router. Without termination resistors, signal reflections off the unterminated end of the cable can cause data corruption. Termination resistors also reduce electrical noise sensitivity due to the lower impedance.

Pin	Signal mark	Description
4	BIN	BINARY IN
5	BOUT	BINARY OUT

Table 9: Connection of I/O

Pin	Signal mark	Description
6	RXD	IN
7	CTS	IN
8	GND	GROUND
9	RTS	OUT
10	TXD	OUT

Table 10: Connection of RS232

The I/O user interface is designed for binary input processing and binary output control. By default, the binary output is open, so it is not grounded. The maximum binary output load is 36 V at 500 mA. The constant current supplied by the binary input is 3 mA.

The functional scheme of connection for the binary input and binary output is drawn on the picture below.

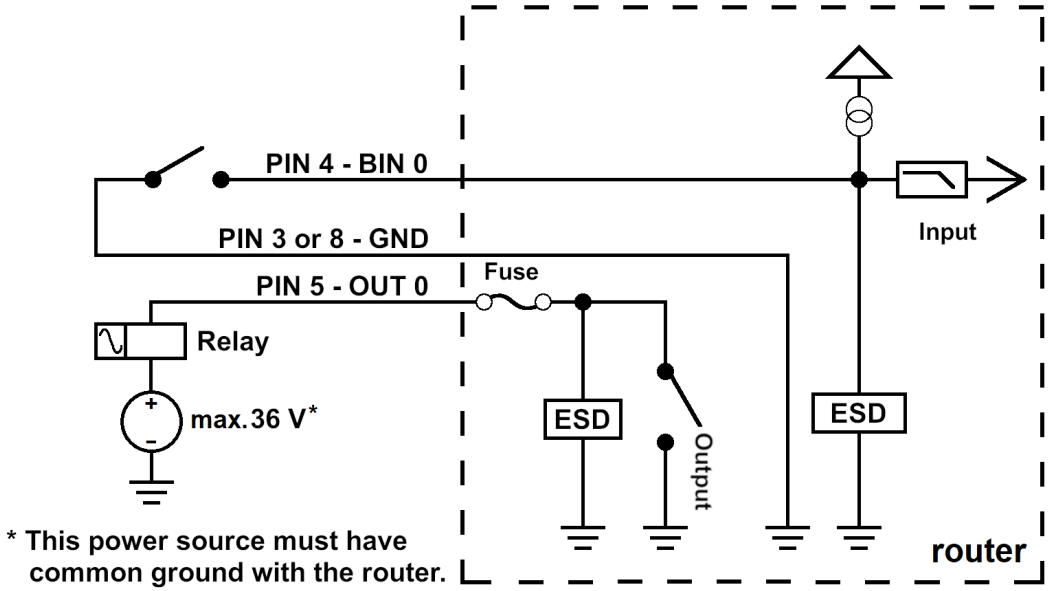

Figure 13: Functional scheme of the binary interface

2.7 LED Status Indication

There are six LED indicators on the front panel to provide router status information. Each ETH port has two additional LEDs that provide information about the port status.

	Caption	Color	State	Description
	PWR	Green Green Green	On Blinking Fast blinking	Starting of the router Router is ready Updating firmware
	USR	Green	On / Blinking / Fast blinking	Function of this LED diode can be selected by user
	ETH0 ETH1	Green Green	On Off	Selected 100 Mbps Selected 10 Mbps
	ETH0 ETH1	Yellow Yellow Yellow	On Brief off blinks Off	The network cable is connected Data transmission The network cable is not connected

Table 11: Status indication

2.8 Reset Functions

The *RST* button has multiple functions. For more details, refer to the configuration manual [1], Chapter *Introduction* → *Device* → *Reset*.

Use a narrow screwdriver or a small tool to press the *RST* button.

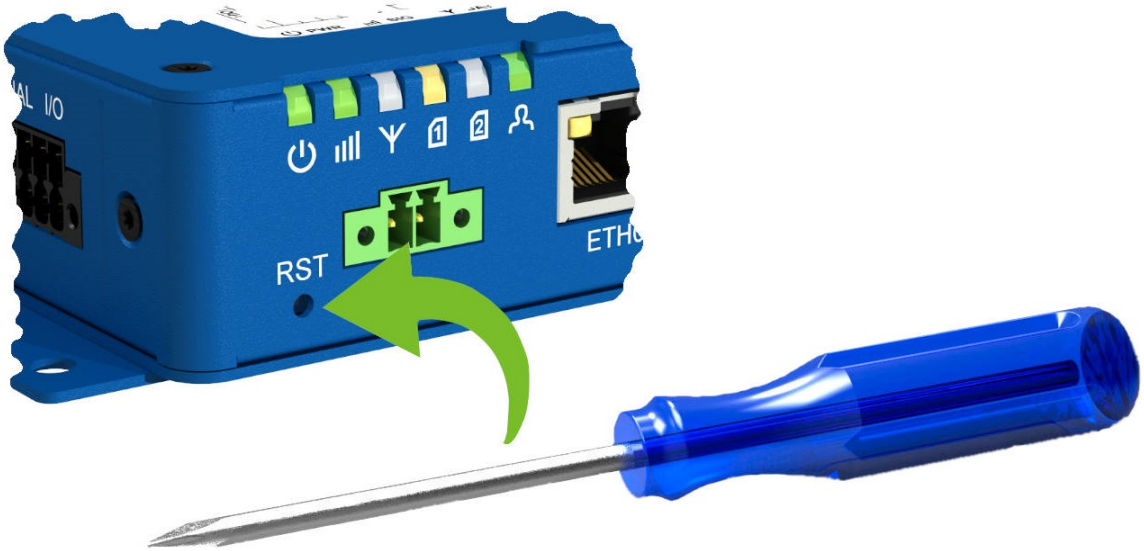

Figure 14: Resetting the Router

3. Technical Parameters

3.1 Basic Parameters

Parameter		Description
Temperature range	Operating Storage	-40 °C to +75 °C -40 °C to +85 °C
Humidity	Operating Storage	0 to 95 % relative humidity non condensing 0 to 95 % relative humidity non condensing
Altitude	Operating	2000 m / 70 kPa
Degree of protection		IP30
Supply voltage		9 to 36 V DC
Battery for RTC		CR1225
Consumption @ 9 V	Idle Average Peak LPM mode	2.0 W 2.5 W 5.0 W 20 mW[1]
Dimensions of device		31,2 × 94 × 129 mm
DIN rail clip dimensions		DIN 35 mm, EN 60715
Weight	Metal box	460 g for non-WiFi version 480 g for WiFi version

Table 12: Basic parameters

[1] 100 mW for product revision lower than 2.0

3.2 Standards and Regulations

The router complies with the following standards and regulations:

Parameter	Description
Radio	EN 301 893, EN 300 328
EMC	EN 301 489-1, EN 301 489-17, AS/NZS CISPR 32, FCC Part 15 Subpart B, ICES-003 Issue 6, EN 61000-6-2
Safety	UL/EN/AS/NZS 62368-1
Transportation	E-Mark E8 homologation number: 10R – 05 10350
Railway	EN 50155 (A1, OT4, ST1, H1, Cat 1 Class B, S1, C1, L4, PD2, K2, PC2)
National	CE, UKCA, FCC, IC, RCM compliant
Environmental	REACH, RoHS3 and WEEE compliant

Table 13: Standards and Regulations

3.3 Type Tests and Environmental Conditions

Phenomena	Test	Description	Test levels
ESD	EN 61000-4-2	Enclosure contact Enclosure air	± 6 kV (crit. A) ± 8 kV (crit. A)
RF field AM modulated	EN 61000-4-3	Enclosure	20 V/m (crit. A) (80 – 1000 MHz) 10 V/m (crit. A) (1 – 6 GHz)
Fast transient	EN 61000-4-4	Signal ports Power ports Ethernet ports	± 1 kV (crit. A) ± 2 kV (crit. A) ± 1 kV (crit. A)
Surge	EN 61000-4-5	Ethernet ports Power ports	± 1 kV (crit. A), shielded cab. ± 2 kV (crit. A)
RF conducted	EN 61000-4-6	All ports	10 V/m (crit. A) (0,15 – 80 MHz)
Radiated emission	EN 55032	Enclosure	Class B
Conducted emission	EN 55032	DC power ports Ethernet ports	Class B Class B
Dry heat	EN 60068-2-2 MIL-STD-810G SAE J1455	+75 °C *, 40 % rel. humidity	
Cold	EN 60068-2-1 MIL-STD-810G SAE J1455	-40 °C *	
Damp heat	EN 60068-2-78 MIL-STD-810G SAE J1455	95 % rel. humidity (+40 °C)	
Vibration	EN 60068-2-64 ed. 2 MIL-STD-810G SAE J1455	Vibration spectrum A.3 (rolling stock)	Category 1 (3 axis, 8 hours per axis)
Shock	EN 60068-2-27 ed. 2 MIL-STD-810G SAE J1455	half-sine, 50 g peak, 11 ms	

Table 14: Type tests and environmental conditions

3.4 Parameters of WiFi

Parameter	Description
Antenna connector	2x R-SMA – 50 Ω (MU-MIMO)
Supported WiFi bands	2.412 to 2.472 GHz, 5.180 to 5.825 GHz
Standards	IEEE: 802.11b, 802.11b+g, 802.11b+g+n, 802.11a, 802.11a+n, 802.11ac
2.4 GHz supported channels	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13
5 GHz supported channels	36, 40, 44, 48, 149, 153, 157, 161, 165
Type of device	Access point, Station
Security – Standards	WEP, WPA, WPA2, WPA3, 802.1X
Security – Encryption	WEP, TKIP, AES
Security – EAP Types	EAP–FAST, EAP–TLS, EAP–TTLS, PEAP–GTC, PEAP–MSCHAPv2, PEAP–TLS, LEAP
AP maximum users	Unlimited (WiFi module supports multi-role operation in STA and AP).

Table 15: Technical parameters of WiFi

3.5 Parameters of Bluetooth

Parameter	Description
Bluetooth Standards	Bluetooth version 2.1 with Enhanced Data Rate Bluetooth 4.2 (Bluetooth Low Energy or BLE)
Features	Bluetooth 4.2 (BDR/EDR/LE), Bluetooth class 1 Adaptive Frequency Hopping (AFH) using Package Error Rate (PER)
Antenna	Shared with WiFi2 R-SMA connector
Frequency Range	2.4 to 2.4835 GHz
Data Rates Supported	1 Mbps (GFSK), 2 Mbps (π/4-DQPSK), 3 Mbps (8-DPSK)
Bluetooth Modulation	GFSK@ 1 Mbps Pi/4-DQPSK@ 2 Mbps 8-DPSK@ 3 Mbps
Encryption support	AES

Table 16: Technical parameters of Bluetooth

3.6 System Configuration

Parameter	Description
CPU	Cortex A8, 1 GHz 2 DMIPS per MHz
Flash memory	Available memory space 1 862 MB • 2x 256 MB – FW • 512 MB – User data storage • 838 MB – Space for Router Apps
RAM	512 MB

Table 17: Other technical parameters

Appendix A: Troubleshooting

If you cannot connect to the router from your PC, your network card may be configured in such a way that it is not possible to connect to the router. Take one or more of the following steps in order to solve the problem:

- Make sure your PC's network card is configured to obtain the IP address form the DHCP server (by default the DHCP server is running in the router).
- Connect the router to the PC via Switch.
- Connect the router to the PC, start the router first and then start the PC after the router's initialization.

✍ **Ethernet connection fails or is not establishing.**

- It is possible to turn auto negotiation off and set a rate and duplex manually on the Ethernet interface of the router. Available on "LAN Configuration" page in the router.

✍ **I cannot connect from the Internet to the device behind the router. I have NAT enabled.**

- The device's gateway has to be configured so it points to the router.

✍ **I can't access my Web server placed behind the router over NAT.**

- The remote HTTP access to the router has to be disabled on "NAT Configuration" page in the router. Also enable "Send all remaining incoming packets to default server" feature and fill in the IP address of your Web server. On the Web server, the default gateway has to be the IP address of the router.

✍ **DynDNS doesn't work.**

- If the same IP address is recorded in your canonic name as a dynamically assigned address, it means that the provider is using NAT or a firewall.
- You can verify NAT using ping to your server with static address and then compare with router's IP address.
- You can verify a Firewall by accessing remotely to the router's Web interface.
- The operator may not provide the address of DNS server and without DNS server's address it is impossible to connect to the dyndns.org server. The following messages will be shown in the System Log:
  - DynDNS daemon started
  - Error resolving hostname: no such file or directory
  - Connect to DynDNS server failed

✍ **L2TP or IPSec isn't establishing.**

- Check the "System Log" page for error messages.

✍ **IPSec tunnel establishes but the communication does not run.**

- Probably there are bad routing rules defined in the connected devices, or the default gateway.

✍ **Serial communication is not working.**

- Verify that the router model supports serial communications. Also verify the serial communication settings. To do so, open the router's configuration menu via the web browser, select the appropriate "Expansion Port" from "Configuration" part of the menu and verify the settings.

✍ Is the router Cisco compatible? Can I use the Cisco configuration?

- No, the Firmware in the router (ICR-OS) is based on Linux with BusyBox. Thus the Cisco configuration cannot be used. But network connections are defined by standards so connecting the router to the Cisco or other networking devices is possible and will be compatible.

✍ FTP or SFTP does not work

- FTP will work on v2 routers only. You can use SFTP on all routers to transfer files to/from the router. If having troubles with FTP on v2 routers, make sure you have FTP enabled: "Configuration" section, "Services", "FTP". Then you can connect with any client on port 21 with name and password same as for the Web interface. If having troubles with SFTP, make sure you have SSH enabled: "Configuration" section, "Services", "SSH". Then you can connect with any client on port 22 with name and password same as for the Web interface.

✍ How can I connect to the router's command line? (SSH, Telnet)

- You can use SSH on all routers or Telnet on v2 routers only. SSH is enabled by default, but you can verify in Web interface in "Configuration" section, "Services", "SSH". Then connect with any SSH client on port 22 of the router. User and password is the same as for the Web interface. Telnet on v2 routers can be enabled here: "Configuration" section, "Services", "Telnet".

Appendix C: Regulatory & Safety Information

Safety Notices

Please, observe the following instructions:

- The router must adhere to all relevant international and national laws, including any specific restrictions governing its use in designated applications and environments.
- To prevent potential injury and appliance damage, ensure compliance with regulations by using only authorized accessories. Unauthorized modifications or use of unapproved accessories could damage the router, violate regulations, and void the warranty.
- Do not attempt to open the router.
- **Caution!** This equipment is not suitable for use in areas with children.
- Ensure the power supply does not exceed 48 V DC maximum.
- Avoid exposing the router to extreme ambient conditions. Safeguard it against dust, moisture, and high temperatures.
- Only deploy routers with appropriate certification and labeling in environments containing flammable or explosive materials, such as gas stations, chemical plants, or areas involving explosives. Users must observe restrictions pertaining to radio device usage in such settings.
- When traveling by plane, switch off the router. Using it onboard could jeopardize flight operations, disrupt mobile networks, and potentially violate regulations. Non-compliance may result in telephone service suspension, cancellation, or legal repercussions.
- Exercise heightened caution when operating the router near personal medical devices like cardiac pacemakers or hearing aids.
- The router may cause interference when operated in close proximity to TV sets, radio receivers, or personal computers.
- It's advisable to create a suitable backup of all critical settings stored in the device's memory.

Product Disposal Instructions

The WEEE (Waste Electrical and Electronic Equipment: 2012/19/EU) directive was introduced to ensure that electrical/electronic products are recycled using the best available recovery techniques to minimize the environmental impact. This product contains high quality materials and components which can be recycled. At the end of it's life this pro- duct MUST NOT be mixed with other commercial waste for disposal. The device contains a battery. Remove the battery from the device before disposal. The battery in the device needs to be disposed of apart accordingly. Check the terms and conditions of your supplier for disposal information.
