Explanatory Notes

Temp – Temperature at reference conditions. FR - Failure rate: It's the rate of product failures expressed as a function of time. MTBF - Mean Time Between Failures is a prediction of a power supply's reliability. SF - Severity factor: Degree of severity in the event of failure. MTBF final - MTBF including Severity factor. **Op. time T** – Operating time of interest. Probability R(T) - Probability that the product will operate for the Op. time T without a failure. R(T) in -25/+55C - Probability in specified interval.
