1. Product Overview

1.1 Product Introduction

The ICR-4401 stands as a **LAN Router** and a powerful edge computing gateway targeted at the global market. It is optimally designed for high-demand IoT applications across various sectors, such as industrial routers and gateways, digital signage, and industrial PCs and tablets.

Housed within a robust metal enclosure, the router comes with five **1Gb Ethernet ports** and an **SFP cage**. It includes interfaces for **RS232**, **RS485**, and **CAN bus**, in addition to two **digital inputs** and two **digital outputs**. A **microSD card** slot is accessible under the cover. WiFi-equipped models provide **WiFi** capability with **3x3 MIMO** antennas.

The router features a **Low Power Mode** and a **hardware watchdog** for automated status monitoring and system restarts, supplemented by additional diagnostic functionalities to bolster overall reliability.

Router configuration is accessible through a **secure web interface**, offering detailed insights into the entire configuration, statuses, signal strength, and logs.

Basic features include two-factor authentication, IPv6 Dual Stack, DHCP, NAT, NAT-T, DynDNS, DNS proxy, VLAN, QoS, NTP, VRRP, port forwarding, and connection backup, among others. The router supports various VPN protocols, including IPSec, OpenVPN, GRE, L2TP, and PPTP, ensuring secure communication.

The router allows for the insertion of **Linux scripts** for automated tasks. It supports the definition of up to **four distinct profiles**, switchable via the web interface, SMS, or digital input.

Router Apps enhance router functionality through custom software programs. For Advantech routers, a diverse array of Router Apps is offered, encompassing categories such as connectivity, routing, services, among others, freely accessible on the Advantech *Router Apps* webpage. Additionally, directly from the router web interface, you can use an **Advantech public server** for the Router App or router firmware installation/update.

Compatibility with Advantech's **remote device management** platform, *WebAccess/DMP*, offers extensive device management and monitoring, ensuring that devices remain up-to-date and secure.

1. Product Overview 1.2 Hardware Overview

1.2 Hardware Overview

In this chapter, all components of the router case are described, including links to chapters that provide more details.

Figure 1: Router Hardware Overview - Front View

#	Item/Caption	Туре	Description
1	LEDs	_	Status LED indication; see Chapter 2.11.
2	RST	_	Button to reboot the router or to restore the default configuration; see Chapter 2.12.
3	PWR	2-p term.	Power supply socket; see Chapter 2.5.
4	ETH2	SFP cage	SFP cage socket see Chapter 2.4.
5	ETH1	RJ45	1 Gb Ethernet for the second LAN; see Chapter 2.2.
6	ETH0	RJ45	1 Gb Ethernet switched connection (with four ports) for the first LAN; see Chapter 2.2.
7	USB	USB-A	USB 2.0 host port; see Chapter 2.9.
8	SERIAL & I/O	14-pin terminal	RS232, RS485, CAN bus, digital input, and digital output interfaces. See Chapter 2.7 for more information, Chapter 3.5 for I/O parameters, and Chapter 3.6 for serial interface parameters.
9	WIFI1	RP-SMA female	Connectors for the WiFi antennas. See Chapter 2.1 for more information and Chapter 3.4 for WiFi parameters.

1. Product Overview 1.3 Order Codes

1.3 Order Codes

Order codes overview is shown in the table below.

Order code	Configuration
ICR-4401	Gb ETH SWITCH SFP cage, USB, microSD card slot, RS232, RS485, CAN bus, two digital inputs, two digital outputs
ICR-4401 S	Gb ETH SWITCH SFP cage, PoE PSE , USB, microSD card slot, RS232, RS485, CAN bus, two digital inputs, two digital outputs
ICR-4401 W	Gb ETH SWITCH SFP cage, dual-band WiFi , USB, microSD card slot, RS232, RS485, CAN bus, two digital inputs, two digital outputs
ICR-4401 WS	Gb ETH SWITCH SFP cage, PoE PSE , dual-band WiFi , USB, microSD card slot, RS232, RS485, CAN bus, two digital inputs, two digital outputs
ICR-4401 W1 ¹	Gb ETH SWITCH SFP cage, dual-band WiFi , USB, microSD card slot, RS232, RS485, CAN bus, two digital inputs, two digital outputs
ICR-4401 W1S ¹	Gb ETH SWITCH SFP cage, PoE PSE , dual-band WiFi , USB, microSD card slot, RS232, RS485, CAN bus, two digital inputs, two digital outputs

Table 3: Order Codes Overview

1.4 Product Revisions

For the product revision history of the entire product platform, refer to the table below. Please note that some revisions may not be available for certain order codes. The revision number is printed on both the packaging and product labels.

The router GUI can also display the product revision under $Status \rightarrow General \rightarrow System\ Information \rightarrow Product\ Revision$. Please note that the default revision (Rev. 1.0) may not be available here.

Rev.#	Description
1.0	Initial version (revision number not printed on the labels).
2.0	New design of the mainboard and PoE board; see PCN-2023-03 for details.

Table 4: HW Revisions History

¹This product has no E8 certification and has a limited operating temperature range of -40 °C to +60 °C.

1.5 Package Contents

The standard set of router includes items listed in the following table:

Item#	Description	Figure	Q'ty
1	Router		1 pcs
2	Wall clips for wall mounting (screwed on the router)	• • • • • • • • • • • • • • • • • • • •	2 pcs
3	2-pin terminal block for power supply (deployed on the router)		1 pcs
4	14-pin terminal block for RS232, RS485, CAN BUS, and I/O (deployed on the router)		1 pcs
5	Printed Quick Start Guide Leaflet		1 pcs

Table 5: Contents of Package

1. Product Overview 1.6 Product Dimensions

1.6 Product Dimensions

For the dimensions of the router see the figures below. Note that all sizes are measured in millimeters.

Variant with Wall Mounting Clip

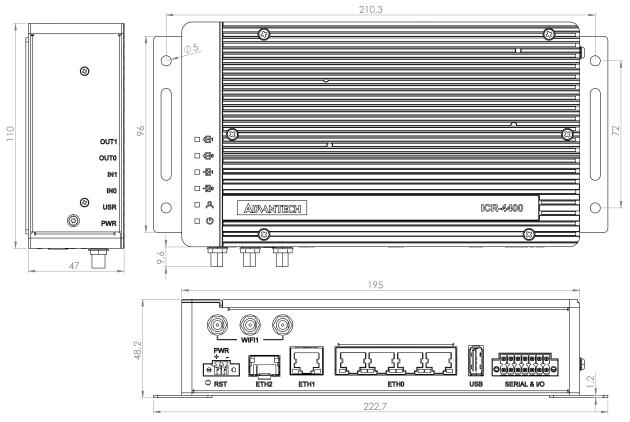

Figure 3: Router Dimensions – Front, Top and Right view with Wall Mounting holder

1. Product Overview 1.6 Product Dimensions

Variant with DIN Rail Clip

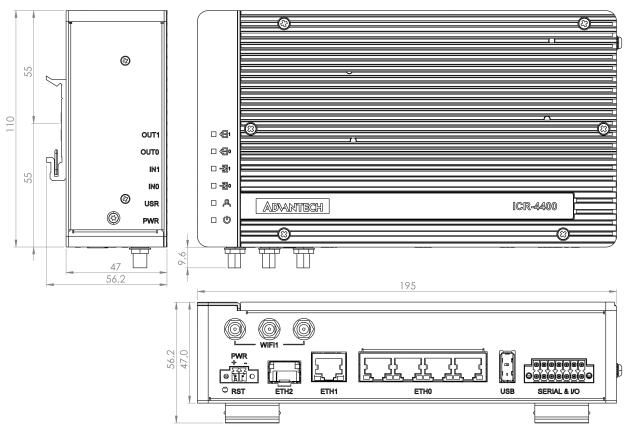

Figure 4: Router Dimensions - Front, Top and Right view with DIN holder

1.7 Mounting Recommendations

The router can be placed in the following ways:

- On a flat surface.
- On a wall using the wall mounting clip (refer to Chapter 1.8).
- On a DIN rail EN 60715 with the metal DIN rail clip (refer to Chapter 1.9).

For most applications involving a built-in router within a switchboard, two types of environments are typically encountered:

- A non-public industrial environment with low voltage but high interference.
- A public environment with low voltage and without high interference.

For both of these environments, it's feasible to mount the router to a switchboard, eliminating the need for immunity examination or EMC-related issues as per EN 61439-1:2011 standards.

To comply with the EN 61439-1:2011 specification, follow these assembly instructions when attaching a router to a switchboard:

- When using whip antennas, maintain a minimum distance of 6 cm from cables and metal surfaces on all sides to avoid interference. If an external antenna is used apart from the switchboard, a lightning conductor is necessary.
- When mounting a router on sheet steel, consider using a cable antenna.

For all cables, it's recommended to bundle them, following these guidelines:

- The combined length of the cable bundle (power supply and data cables) should not exceed 1.5 m. If data cable length surpasses 1.5 m or if the cable runs toward the switchboard, installing surge protectors is advisable.
- Data cables must not be bundled with mains voltage cables (230 V/50 Hz or 120 V/60 Hz).
- Ensure sufficient space is left between each connector for cable handling.
- For proper router functionality, use an earth-bonding distribution frame to ground the grounding screw (refer to Chapter 2.5).

1. Product Overview 1.8 Wall Mounting

1.8 Wall Mounting

The wall mounting clip is included as a standard accessory with the router.

The router can be affixed to a wall or another surface using the wall mounting clips. Two wall mounting clips are pre-assembled to the router during production and need to be rotated as shown in Figure 5.

Each clip features two holes with a diameter of 5 millimeters for screw placement. For precise mounting dimensions, refer to Figure 3 in Chapter 1.6.

When attaching the wall mounting clip, tighten the screws with a maximum torque of 0.4 Nm.

Figure 5: Rotated Wall Mounting Clips

1. Product Overview 1.9 DIN Rail Mounting

1.9 DIN Rail Mounting

The DIN rail clips are not included as standard accessories with the router. However, they can be ordered using the order code *BB-DIN-ICR32* (two pieces for one router).

You can attach two DIN rail clips to the router for mounting it onto a DIN rail that complies with the 60715 standards. The default position of the clips is depicted in Figure 6. If necessary, the clips can also be rotated vertically.

!

When attaching the clips, tighten the screws with a maximum torque of 0.4 Nm.

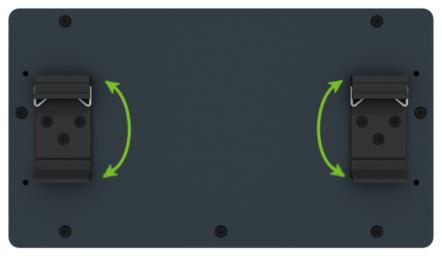

Figure 6: Default Position of the DIN Rail Clips

To remove the router from the DIN rail, lightly push down on the router to disengage the bottom part of the DIN rail clip from the rail. Then, pivot the bottom part of the router away from the DIN rail, as demonstrated in Figure 7.

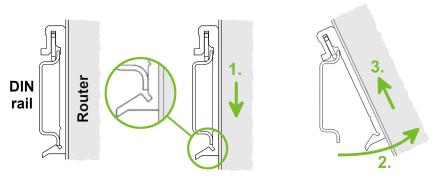

Figure 7: Removing Router from the DIN Rail

1. Product Overview 1.10 Product Label

1.10 Product Label

The figure below shows an example of the product labels with all the information printed on them.

Figure 8: Product Label

1. Product Overview 1.11 First Use

1.11 First Use

You can perform the initial configuration of the router using a web browser on your PC. This interface enables router monitoring, configuration, and administration.

 Before putting the router into operation, ensure that all components required for running your applications are connected. Refer to Chapter 1.2 Hardware Overview for an overview of the hardware.

The procedure for connecting to a new router is described in the *Configuration Manual* [1], Chapter $Introduction \rightarrow Configuration Environments \rightarrow Initial Web Configuration GUI Access. This manual also provides detailed descriptions and examples of router configuration using the web interface.$

2. Hardware Functionality

See Chapter 1.2 for an overview of the product's hardware, along with links to chapters offering detailed explanations.

2.1 Antennas Interfaces

Three RP-SMA female connectors (WIFI1) are available for WiFi antenna connections.

Recommended tightening moment for screwing the antenna to the SMA connector is 0.9 Nm.

2.2 Ethernet Interfaces

The RJ45 panel socket is used for four ETH0 (switched) and one ETH1 Ethernet interfaces. The pinout of the socket is shown in Figure 11 and described in Table 6.

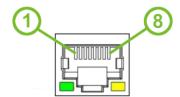

Figure 9: Ethernet Connector Pinout of RJ45 Socket

Pin	10base-T & 100base-T	1000base-T	PoE PSE (Mode B)
1	Tx+ (Transmit Data+)	BI_DA+ (BiDirectional pair A+)	_
2	Tx- (Transmit Data-)	BI_DA- (BiDirectional pair A-)	_
3	Rx+ (Receive Data+)	BI_DB+ (BiDirectional pair B+)	_
4	_	BI_DC+ (BiDirectional pair C+)	PoE PSE+ (positive pole)
5	_	BI_DC- (BiDirectional pair C-)	PoE PSE+ (positive pole)
6	Rx- (Receive Data-)	BI_DB- (BiDirectional pair B-)	_
7	_	BI_DD+ (BiDirectional pair D+)	PoE PSE- (negative pole)
8	_	BI_DD- (BiDirectional pair D-)	PoE PSE- (negative pole)

Table 6: Ethernet Connector Pinout Description of RJ45 Socket

- All four ETH0 ports can be used for **PoE PSE** if the router is equipped with this feature. For more information about the PoE, see Chapter 2.3; for technical parameters, see Chapter 3.7.
- The isolation barrier of the Ethernet ports against the ground is 1500 V.

2.3 Power over Ethernet (PoE) PSE

- \bigcirc Available only for models with the PoE PSE feature; see Chapter 1.3 for the order codes.
- The router supports the IEEE 802.3af/PoE (Type 1) and IEEE 802.3at/PoE+ (Type 2) standards and is Mode B compliant.
- To control the PoE functionality, you can use the pse command. For detailed information, please refer to the *Command Line Interface* application note.
- Please note that the router's power supply must be 48 V DC to operate as the PoE PSE device.

The PoE PSE feature enables the router to provide power to other devices over the Ethernet socket. You can refer to the functional scheme in Figure 10.

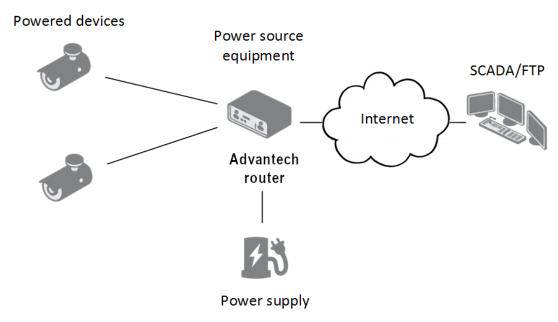

Figure 10: PoE PSE Funcional Scheme

The PoE PSE feature is supported by all four ETH0 network sockets and can be individually enabled in the *Ethernet* configuration pages. Detailed instructions can be found in the router configuration manual [1], specifically in Chapter $Configuration \rightarrow Ethernet\ Configuration$. For information about the Ethernet socket pinout, please refer to Chapter 2.2.

To monitor the current PoE state, navigate to the *General* status page in the GUI. When PoE is enabled and an external device is being powered, you can access information about current, voltage, power, and power class here.

The following table summarizes the PoE parameters.

PoE PSE parameters	
Required power supply parameters	48 V / up to 135 W
Power available to a PoE device	12.95 W / per port
Required power supply wattage for a PoE device	15.40 W / per port
Power available to a PoE(+) device	25.50 W / per port
Required power supply wattage for a PoE(+) device	30.0 W / per port

Table 7: PoE PSE Parameters

PoE Power Budget Examples

Example #1

This example is for the Advantech RPS-ICR4-WR2-PSE power supply, which can supply a power of **65 W**. We will use 15 W as the maximum router power consumption; see Chapter efchap:BasicParams. You can use this power supply to power:

- up to three PoE devices $(3 \times 15.4 \text{ W} + 15 \text{ W} = 61.2 \text{ W} < 65 \text{ W})$,
- just one PoE+ device $(1 \times 30 \text{ W} + 15 \text{ W} = 45 \text{ W} < 65 \text{ W})$.

Example #2

To power four PoE+ devices, you should use a power supply with a minimum rating of 135 W. You can calculate this as follows:

Required power supply wattage = 4 × 30 W + 15 W = 135 W.

Ensure that the power supply you use can provide enough power to cover the required power consumption of all connected PoE devices, including the router itself. We recommend using a power supply with some power reserve.

2.4 SFP Cage

A hot-pluggable (SFP) network interface module with a speed of up to 10 Gbps can be settled into the ETH2 SFP cage.

Installing an SFP Module

To install an SFP module, please refer to Figure 11 and follow these steps:

- If the SFP module is equipped with a bale clasp, ensure it is closed before inserting the SFP module.
- Hold the SFP module with the hardware label facing up.
- Gently insert the SFP module into the ETH2 slot and push it until it securely snaps into place.

Figure 11: SFP Module Installation

See Table 8 for a list of successfully tested SFP modules on the product.

Model	Manufacturer
SFP-GSM-20K	Advantech
ML-S+31Dout-10	MaxLink
S-3553LC20D	MikroTik
SFP-PLUS-LR10-HPE	Hewlett Packard
SFP-TXCIS	OEM
TXM431-LR(UN)	TP-Link
UF-RJ45-1G	Ubiquiti

Table 8: Tested SFP Modules

2.5 Power Supply

A two-pin terminal connector (pitch 3.5 mm) is utilized to power the router. The corresponding connector is included as a standard accessory with the router.

F	Pin	Signal mark	Description
	1	VCC(+)	Positive pole of DC supply voltage (+9 to +48 V DC)
	2	GND(-)	Negative pole of DC supply voltage

Table 9: Power connector pinout

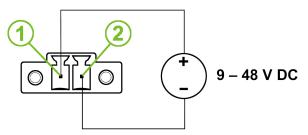

Figure 12: Power Connector Pinout

The required power supply voltage for the router ranges between +9 V and +48 V DC. Refer to the connection scheme in Figure 12 for proper setup. The router is equipped with built-in protection against reversed polarity, functioning without signaling. To guarantee correct operation, the power source must be capable of providing a sufficient amount of energy, as detailed in the consumption section of Chapter 3.1.

Grounding the router using the grounding screw eliminates the protection against reversed polarity. Ensure the negative pole of the DC power supply shares the same voltage reference as the grounding screw. A voltage difference between these points may damage the router, necessitating repairs exclusively by an authorized service center.

The power voltage for the PoE router version must be 48 V DC for it to function as a PoE PSE device.

All metal parts, including the box, are interconnected with the negative pole of the power supply (common pole). If recommended for the installation environment, protect the router by properly grounding it using the grounding screw, as depicted in Figure 13. The maximum tightening torque for the grounding screw is 1 Nm.

Figure 13: Position of the Grounding Screw

2.6 Low Power Mode

In applications requiring low power consumption, such as solar power (not 24/7 mode), it is strongly recommended to use the Low Power Mode (LPM) before shutting down the entire router.

LPM (Low Power Mode) is a router mode in which the router enters a sleep state with minimal power consumption; you can find details about LPM power consumption in Chapter efchap:BasicParams. The router can be awakened from this mode either by applying a signal to the BIN1 input or after a predefined period of time. To put the router into LPM mode, you can use the 1pm command; for more information, refer to the *Command Line Interface* application note.

2.7 I/O Port Interfaces

The I/O user interface is designed for digital input processing and digital output control. The pinout of the I/O interface is described in Figure 14 and Table 10. For detailed electrical parameters see Chapter 3.5. The functional scheme of connection for the digital input and digital output is in Figure 15.

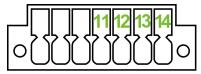

Figure 14: I/O Connector Pinout

Pin	Signal mark	Description
11	BIN0	The first digital input
12	BOUT0	The first digital output
13	BIN1	The second digital input
14	BOUT1	The second digital output

Table 10: Connection of I/O Ports

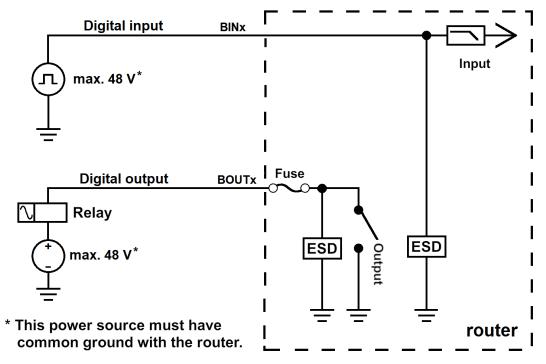

Figure 15: Functional Scheme of the Digital Interface

2.8 Serial Interfaces

The RS232, RS485 CAN serial interfaces together with the two I/O interfaces are physically connected to the 14-pin terminal block panel socket. All these interfaces are not isolated from the router. The pinout of this connector is described in Figure 16 and the tables below.

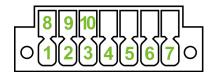

Figure 16: Serial Connector Pinout

Pin	Signal mark	Description
1	RXD	Received Data
2	CTS	Clear to Send
3	GND	Ground
4	RTS	Request to Send
5	TXD	Transmit Data

Table 11: Connection of RS232

Pin	Signal mark	Description
6	CAN_H	CAN High
7	CAN_L	CAN Low

Table 12: Connection of CAN Bus

Pin	Signal mark	Description
8	B (+)	In/Out
9	A (-)	In/Out
10	GND	Ground

Table 13: Connection of RS485

2.9 USB Port

The router is equipped with a single USB 2.0 host port featuring a USB-A type socket. The pinout details of the USB socket are illustrated in Figure 17 and further described in Table 14.

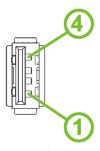

Figure 17: USB Connector Pinout

Pin	Signal Mark	Description	Data Flow Direction
1	+5 V	Positive pole of 5 V DC supply voltage, 0.5 A	
2	USB Data -	USB data signal (negative pole)	Input/Output
3	USB Data +	USB data signal (positive pole)	Input/Output
4	GND	Negative pole of DC supply voltage	

Table 14: USB Connector Pinout

For detailed USB port configuration options, refer to the configuration manual [1], Chapter Configuration \rightarrow USB Port.

2.10 MicroSD Card Reader

The microSD card reader is located under the SIM cover on the router. This card reader enables the router to utilize microSD memory cards. The technical specifications are presented in Table 15.

Technical specifications of microSD card				
Supported technologies	SD, SDHC, SDXC			
Supported capacity	up to 32 GB from 32 GB to 512 GB			
Supported microSD card filesystems vfat, ext2, ext3, ext4				

Table 15: Technical Specifications of MicroSD Card

Inserting the microSD card:

- To remove an inserted microSD card, use the flat end of a spudger, or your fingernail, and press the card slightly into its slot until you hear a click. Release the card, and it will pop out of its slot.
- To insert a microSD card, push the card into the slot with the correct orientation as shown in the picture until it clicks into place.

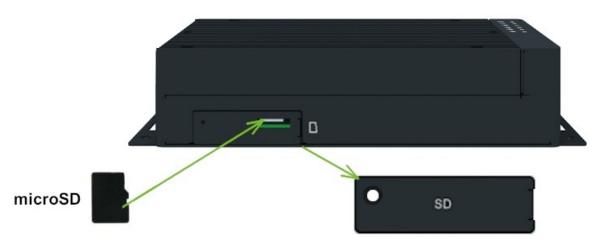

Figure 18: MicroSD Card Insertion

Mounting microSD Card to the System

To access the microSD card within the router's system, it must be mounted. Follow these steps to mount the card:

- Use the *dmesg* command to view the list of recently connected devices.
- Identify the entry for the microSD card in the command's output, for example: mmcblk0: p1
- To mount the card to the mnt directory, use the mount command: mount /dev/mmcblk0p1 /mnt
- For more information about the commands for creating, mounting, checking, and unmounting a file system on a microSD card, refer to the application note for the *Ext4 Filesystem Utilities* router app.

2.11 LED Status Indication

There are status LEDs on the top side of the router to provide router status information. Moreover, ETH0 and ETH1 connectors, located on the front panel, have two additional LEDs providing information about the port status.

	Caption	Color	State	Description
ம	PWR	Green Green Green	On Blinking Fast blinking	The router is booting up. The router booted up and is ready. The router firmware is being updated.
ኢ	USR	Green	_	The function of this LED is user-defined.
∃ 0	IN0	Green	On	The first digital input is active.
∃ 1	IN1	Green	On	The second digital input is active.
= 0	OUT0	Green	On	The first digital output is active.
[]1	OUT1	Green	On	The second digital output is active.
	ETH0 ETH1	Green Green	On Off	Selected 1 Gbps bit rate. Selected 100/10 Mbps bit rate.
	ETH0 ETH1	Yellow Yellow Yellow	On Brief off blinks Off	The network cable is connected. Data transmission. The network cable is not connected.

Table 16: LED Status Indication

2.12 Reset Functions

The *RST* button has multiple functions. For more details, refer to the configuration manual [1], Chapter $Introduction \rightarrow Device \rightarrow Reset$.

1

Use a narrow screwdriver or a small tool to press the RST button.

Figure 19: Resetting the Router

3. Technical Parameters

3.1 Basic Parameters

Parameter		Description

Table 19: Type Tests and Environmental Conditions

3. Technical Parameters 3.4 Parameters of WiFi

3.4 Parameters of WiFi

Parameter	Description
Short Module Description	Dual Band 2.4/5GHz 3x3 WiFi 5 (802.11ac Wave 1)
Supported Standards	IEEE: 802.11ac compliant & compatible with 802.11a/b/g/n
Antenna Connectors	3x3 MIMO RP-SMA Input impedance: 50 Ω
Data Rate (3x3 MIMO OFDM)	Up to 600 Mbps @ 2.4 GHz Up to 1300 Mbps @ 5 GHz
Frequency Ranges	2.412 – 2.472 GHz 4.920 – 5.825 GHz
Spectrum Widths	20/40MHz @ 2.4GHz 20/40/80MHz @ 5GHz
Modulation Techniques	OFDM: BPSK, QPSK, DBPSK, DQPSK, 16-QAM, 64-QAM, 256-QAM
2.4 GHz supported channels	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13
5 GHz supported channels	36, 38, 40, 42, 44, 46, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140, 149, 153, 157, 161, 165
Type of device	Access point (AP) Station (STA) Multi-role (AP & STA)
Key Features	Spatial Multiplexing, Cyclic-Delay Diversity (CDD), Low-Density Parity Check (LDPC) Codes, Maximal Ratio Combining (MRC), Space Time Block Code (STBC), Dynamic Frequency Selection (DFS), IEEE 802.11d, e, h, i, j, k, r, v time stamp, and w standards
Security – Standards	WPA, WPA2, WPA3, 802.1X
Security – Encryption	WEP, TKIP, AES
Security – EAP Types	EAP-FAST, EAP-TLS, EAP-TTLS, PEAP-GTC, PEAP-MSCHAPv2, PEAP-TLS, LEAP
TX Power (per chain)	Max. 21 dBm @ 2.4 GHz Max. 18 dBm @ 5 GHz

Table 20: Technical Parameters of WiFi

3.5 Parameters of I/O Ports

Electrical characteristics of the digital input are in Table 21. Status of the digital input can be retrieved in the router's web interface (on the *General Status* page) or by the status ports and io get commands, see *Command Line Interface* application note.

Logical ¹	Voltage	Current	Status ²
1	3 V	0.5 mA	Off
0	5 V	0.8 mA	On
0	12 V	1.6 mA	On
0	48 V	3.4 mA	On

Table 21: Electrical Characteristics of Digital Input

The maximum digital output load is 500 mA at 48 V.

3.6 Parameters of Serial Interfaces

Supported parameters of the RS232 and RS485 interfaces, which can be configured in *Expansion Port 1* resp. *Expansion Port 2* menu items, are in Table 22.

Parameter	Description
Baudrate	300, 600, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400.
Data Bits	5, 6, 7, 8.
Parity	none, even, odd.
Stop Bits	1, 2.
Flow Control	none, hardware.

Table 22: Parameters of Serial Interfaces

¹The digital status returned by the io get shell command.

²The digital status returned by the status ports shell command and displayed on the *General Status* page.

3.7 Parameters of PoE

For more information about the PoE PSE feature, including the parameters, see Chapter 2.3.

3.8 System Configuration

The main parametes of the system are listed in Table 23.

Parameter	Description
CPU architecture	Quad-Core ARMv8-A (core Cortex-A72)
CPU frequency	1200 MHz
CPU power	4.72 DMIPS/MHz
Flash memory	 4 MB of NOR 4 096 MB of eMMC 838 MB for Router Apps 512 MB for customer data The remaining space is reserved for the system.
RAM size	1 024 MB
Watchdog	HW watchdog
RTC	Battery backup RTC
TPM	Trusted Platform Module (TPM) 2.0

Table 23: System Configuration

Appendix A: Troubleshooting

If you cannot connect to the router from your PC, your network card may be configured in such a way that it is not possible to connect to the router. Take one or more of the following steps in order to solve the problem:

- Make sure your PC's network card is configured to obtain the IP address form the DHCP server (by default the DHCP server is running in the router).
- · Connect the router to the PC via Switch.
- Connect the router to the PC, start the router first and then start the PC after the router's initialization.

Ethernet connection fails or is not establishing.

• It is possible to turn auto negotiation off and set a rate and duplex manually on the Ethernet interface of the router. Available on "LAN Configuration" page in the router.

I cannot connect from the Internet to the device behind the router. I have NAT enabled.

• The device's gateway has to be configured so it points to the router.

Lan't access my Web server placed behind the router over NAT.

• The remote HTTP access to the router has to be disabled on "NAT Configuration" page in the router. Also enable "Send all remaining incoming packets to default server" feature and fill in the IP address of your Web server. On the Web server, the default gateway has to be the IP address of the router.

DynDNS doesn't work.

- If the same IP address is recorded in your canonic name as a dynamically assigned address, it means that the provider is using NAT or a firewall.
- You can verify NAT using ping to your server with static address and then compare with router's IP address.
- You can verify a Firewall by accessing remotely to the router's Web interface.
- The operator may not provide the address of DNS server and without DNS server's address it is impossible to connect to the dyndns.org server. The following messages will be shown in the System Log:
 - DynDNS daemon started
 - Error resolving hostname: no such file or directory
 - Connect to DynDNS server failed

L2TP or IPSec isn't establishing.

· Check the "System Log" page for error messages.

IPSec tunnel establishes but the communication does not run.

• Probably there are bad routing rules defined in the connected devices, or the default gateway.

Serial communication is not working.

• Verify that the router model supports serial communications. Also verify the serial communication settings. To do so, open the router's configuration menu via the web browser, select the appropriate "Expansion Port" from "Configuration" part of the menu and verify the settings.

Is the router Cisco compatible? Can I use the Cisco configuration?

• No, the Firmware in the router (ICR-OS) is based on Linux with BusyBox. Thus the Cisco configuration cannot be used. But network connections are defined by standards so connecting the router to the Cisco or other networking devices is possible and will be compatible.

FTP or SFTP does not work

• FTP will work on v2 routers only. You can use SFTP on all routers to transfer files to/from the router. If having troubles with FTP on v2 routers, make sure you have FTP enabled: "Configuration" section, "Services", "FTP". Then you can connect with any client on port 21 with name and password same as for the Web interface. If having troubles with SFTP, make sure you have SSH enabled: "Configuration" section, "Services", "SSH". Then you can connect with any client on port 22 with name and password same as for the Web interface.

How can I connect to the router's command line? (SSH, Telnet)

• You can use SSH on all routers or Telnet on v2 routers only. SSH is enabled by default, but you can verify in Web interface in "Configuration" section, "Services", "SSH". Then connect with any SSH client on port 22 of the router. User and password is the same as for the Web interface. Telnet on v2 routers can be enabled here: "Configuration" section, "Services", "Telnet".

Appendix B: Customer Support

Customer Support for Europe

Advantech Czech s.r.o.

Sokolska 71 562 04, Usti nad Orlici Czech Republic

Appendix C: Regulatory & Safety Information

Safety Notices

Please, observe the following instructions:

- The router must adhere to all relevant international and national laws, including any specific restrictions governing its use in designated applications and environments.
- To prevent potential injury and appliance damage, ensure compliance with regulations by using only authorized accessories. Unauthorized modifications or use of unapproved accessories could damage the router, violate regulations, and void the warranty.
- · Do not attempt to open the router.
- Caution! This equipment is not suitable for use in areas with children.
- Ensure the power supply does not exceed 48 V DC maximum.
- Avoid exposing the router to extreme ambient conditions. Safeguard it against dust, moisture, and high temperatures.
- Only deploy routers with appropriate certification and labeling in environments containing flammable
 or explosive materials, such as gas stations, chemical plants, or areas involving explosives. Users
 must observe restrictions pertaining to radio device usage in such settings.
- When traveling by plane, switch off the router. Using it onboard could jeopardize flight operations, disrupt mobile networks, and potentially violate regulations. Non-compliance may result in telephone service suspension, cancellation, or legal repercussions.
- Exercise heightened caution when operating the router near personal medical devices like cardiac pacemakers or hearing aids.
- The router may cause interference when operated in close proximity to TV sets, radio receivers, or personal computers.
- It's advisable to create a suitable backup of all critical settings stored in the device's memory.

Product Disposal Instructions

The WEEE (Waste Electrical and Electronic Equipment: 2012/19/EU) directive was introduced to ensure that electrical/electronic products are recycled using the best available recovery techniques to minimize the environmental impact. This product contains high quality materials and components which can be recycled. At the end of it's life this pro- duct MUST NOT be mixed with other commercial waste for disposal. The device contains a battery. Remove the battery from the device before disposal. The battery in the device needs to be disposed of apart accordingly. Check the terms and conditions of your supplier for disposal information.

Appendix D: Related Documents

[1] ICR-4400 Configuration Manual (see Documents to download \rightarrow Manuals section)

We, Advantech Czech s.r.o., declare that the radio equipment narrated in this user's manual complies with Directive 2014/53/EU (WiFi version) and with the essential requirements and other relevant provisions of Directives 2014/30/EU and 2014/35/EU (non-WiFi version).

We, Advantech Czech s.r.o., declare that the radio equipment narrated in this user's manual complies with Radio Equipment Regulations 2017 (S.I. 2017 No. 1206) and with the Electromagnetic Compatibility Regulations 2016 (S.I. 2016 No. 1091 and S.I. 2016 No. 1101).
